PROTECTION FUNCTIONS

- Burnout Protection: Temperature of charger exceeds the limitation. The charge will low down the power load. Temperature of environment exceeds 65°C , the charger will stop charging and switch itself to standby mode until temperature of environment goes down.

- Protection for Reverse Connection of Batteries:The circuit inside the charger shuts down with batteries when the batteries are connected reversely and will not damage the charger.

- NO-load Protection: There is no output when the batteries are not connected.

- Short Circuit Protection: The circuit inside the charger shuts down with batteries when output is short circuit. The charger will start charging only after troubleshooting and restart the charger.

- Automatic shutdown when fully charging: The charging automatically turns off after the battery is fully charged according to the charger's judgment.
